

# Logistics for High-Value Medical Equipment

Precision handling, dedicated coordination, and specialized equipment for medical and healthcare shipments.

## The Risks Healthcare Teams Face

Healthcare logistics leaves no room for missteps. Delays disrupt tightly coordinated schedules, and if improperly secured, calibration-sensitive systems like diagnostic, imaging and treatment equipment are highly vulnerable to vibration and damage. These are devices that require specialized handling, not general transport.

When vendors fall out of sync or communication breaks down, momentum slows and critical timelines slip. In medical environments, every shipment demands precision from origin to destination.

**General carriers aren't built for this. *Legacy is.***

## Legacy Solves Challenges General Carriers Can't

Legacy keeps your medical shipments on schedule with:

- » Specialized trailers, including flat-floor, high cube, liftgate, and side-door units
- » Climate-controlled trailers for sensitive equipment
- » White glove & final mile delivery handling for healthcare environments
- » Rigging support for heavy or delicate systems
- » One account manager coordinating access, schedules, and vendor partner(s)

## Built for Healthcare Environments

Legacy supports a wide range of sensitive medical systems:

- » Imaging such as CT and MRI
- » Surgical robotics and cancer treatment systems
- » Diagnostic and lab equipment
- » Hospital, clinic, and lab access requirements
- » Securement for non-uniform or delicate equipment

**One partner. No handoffs. Complete confidence.**

**LEGACY**

# How Legacy Protects High-Value Medical Shipments

Challenge	Legacy's Solution
✗ Vibration risks for diagnostic, imaging and treatment systems	✓ Specialized securement and trained crews
✗ Tight schedules that rely on coordination	✓ One account manager owns timing and communication
✗ Oversized or delicate systems	✓ Custom crating, rigging support and specialized equipment
✗ Sensitive environmental needs	✓ Climate-controlled trailer options when required

## Our Process

### 1. Pre-Planning and Site Requirements

Legacy reviews timing and site access requirements early to support coordinated execution.

### 2. Crate Design and Preparation

Custom crating services are offered nationwide, if needed.

### 3. Specialized Transport

Shipment travels on Legacy and Unigroup assets with trained crews.

### 4. Arrival and Final Mile & White Glove Delivery Handling

White glove final mile entry into facilities with rigging support available.

### 5. Completion and Documentation

Closeout communication and required paperwork.

## Real-World Applications

- » Delivery of imaging systems requiring vibration-sensitive handling and coordinated timing
- » Transport and placement support for medical equipment entering clinical and lab environments
- » Crating and transportation of diagnostic equipment from medtech manufacturers to hospitals
- » Time-sensitive shipments requiring climate control

## Let's plan your next medical shipment.
